

### **Item 3 Engineer training ( Internet )**

Distance training course materials / Tools / Techniques

What is the target audience envisaged for training using the Internet ? What is the information available on currently employed distance-learning techniques ? What kind of electronic material [ e.g. CDs, VCDs ] may readily be prepared ? Is there any hard copy material sent to candidates ? Will there be any talk and chalk sessions, or is only e-mail to be used for questions asked by trainees ? What should be the extent / duration / scope of training using the Internet ? Will there be any hands-on sessions ? Will engineers be brought together for written assessment / examinations ? How will an evaluation of the success of the training be conducted ? Currently many universities in Europe and North America, including Harvard, are offering short courses as well as degree courses by distance learning. What are the special techniques employed by such institutions to streamline the presentation of technical material as well as to evaluate candidates ?

### **Item 3 FEEDBACK**

Make stuff available on Internet. Include as wide a literature as possible via same medium.
